

The Investment Property

Chris Edmonds · University of Alabama at Birmingham · cte@uab.edu · www.edmondshub.com

The case

Four owners are buying an investment property together. Your job: identify every cost that comes with owning and running the property, and decide how each cost should be allocated among the four owners. There is no single right answer. Any defensible method counts. The reasoning is the point.

#	Cost	Allocation method equal split? ownership %? usage? something else?	Why this method?
