

▲ PROBLEM-BASED LEARNING

Assessment and engagement in the **age of AI**

Assess the **thinking**, not the answer. Spend class time on **problems**, not lecture.

Mark Edmonds

University of Alabama at Birmingham · McGraw Hill Symposium, Salt Lake City

Overview of our texts

Three goals drive everything in the Edmonds series. Today we'll show you how AI is reshaping them, then put our newest resources in your hands.

Keep accounting relevant

The profession is changing fast, and the intro course needs to keep up.

Make accounting accessible to students

Problems first, terminology second.

Make it easy and fun to teach

Resources that cut prep time and keep students engaged.

The Edmonds series · McGraw Hill

Two challenges kept coming up

When you registered, we asked what topics and challenges matter most to you. Here's what this room said.

Student engagement

10 of 13

AI in the classroom

9 of 13

Share of registered attendees selecting each topic

"How do we assess student learning in a time when AI makes it so easy for students to get the correct answers?"

"Students using AI and not learning for themselves"

"Use of AI that doesn't circumvent learning objectives"

"Making the material relevant to the 80%+ of students who have no interest in accounting"

Two questions this session answers

1

How do we assess students when AI can produce the answer?

Move assessment to where the thinking happens: in the room, step by step.

2

How do we make class time worth showing up for?

Move the lecture home so students spend class time applying what they learned to a real business problem.

The answers to both questions are already in Edmonds Hub.

The answer is free now. The learning isn't.

Nearly every student uses AI, about half the time to get the answer, and the cost shows up in what they retain.

95%

use AI in their studies

94% use it on assessed work. AI text pasted straight into submissions went from 3% to 12% in two years.

~half

of conversations are "Direct"

"Solve this for me." "Write this for me."
Finished answers with minimal engagement, across ~574K student conversations.

83%

couldn't quote their own essay

minutes after writing it with an LLM. MIT calls it **cognitive debt**: brain connectivity dropped with every layer of help.

If the graded thing is a final answer, **we're grading the AI.**

Assess the **thinking**, not the answer

AI can hand a student a finished answer at home. It can't stand in for them in the room while they reason through a problem in front of you.

WHAT WE USUALLY GRADE

The final answer

Correct or not, you can't tell who did the thinking.

Work done out of sight

Homework is where AI does the most work and you see the least.

Feedback days later

By the time it's graded, the misconception has set.

WHAT WE CAN SEE INSTEAD

Every step of the reasoning

You see exactly where each student's thinking broke.

Done live, in the room

The thinking happens where AI can't take it for them.

Feedback in the moment

Fix the misconception while the whole class is still on the problem.

Flip the time: **lecture at home, problems in class**

Every Edmonds text comes with a full video library, so students can learn the material at home. That frees class time for work that engages them.

AT HOME

Textbook video library

IN CLASS

PBL cases

A student-life problem worked cold. Groups argue it out, and an AI pushes back.

Interactive assessment

Students work problems step by step. You see where reasoning breaks.

▲ NOW FOR REAL

Let's run one. **Live.**

Phones out, a real room, and an AI counterpart that pushes back on whatever you decide.

Then we'll come back to the slides and unpack what happened.

NOW RUNNING

Joint Ownership Inc.

live.edmondshub.com/joint-ownership

How that just **assessed** the room

Across 25 studies, the average PBL student out-scores **~86%** of traditionally-taught peers on critical thinking

1 You saw the reasoning, not just the result

Where the room's thinking broke, cell by cell, while it was happening.

2 Nobody could outsource it

The AI was arguing with the class, not doing the work for them. Students had to defend their own choices.

3 Feedback landed while it still mattered

Misconceptions and cognitive bias got named in the moment, in front of everyone.

4 Understanding first makes AI useful instead of dangerous

Students can only evaluate AI output on problems they understand. That's the skill worth assessing.

How that just **engaged** the room

- 1 Everyone answered, not just the front row**
Every student had a decision to make and a reason to make it.
- 2 A problem they own beats a problem they're assigned**
No jargon up front. Students reasoned about something they understood, and the accounting language came after.
- 3 Something talked back**
The AI is cast to the lesson: a counterpart, a Socratic prompter, an analyst, even a live phone call. It reacts to what was typed seconds ago.
- 4 Being wrong, loudly, was the point**
Mistakes became the raw material for the lesson instead of a grade penalty.

Built for both problems, ready today

PBL cases and interactive assessments are free at edmondshub.com, with more shipping regularly. The video library comes with your Edmonds textbook.

PBL cases

Student-life problems with an AI cast to the lesson. Students decide, defend, and get pushed back on.

▲ ASSESSMENT ▲ ENGAGEMENT

Interactive assessments

Step-by-step problems worked in class. You see each student's reasoning, not just the final answer.

▲ ASSESSMENT

Textbook video library

Included with every Edmonds textbook. Students learn the content at home, so class time goes to problems.

▲ ENGAGEMENT

The class session

One repeatable structure, droppable into any course, any topic.

1 • Open with the PBL case

A student-life problem, no jargon. Groups propose solutions cold.

2 • Add the language

Introduce accounting terminology and the business version of the same problem.

3 • Work problems

In-class accounting problems, now anchored to a problem they understand.

▲ TAKE ONE BACK WITH YOU

**Pick the chapter you teach next
month.
Run it cold, the way we just did.**

Sign in at edmondshub.com, no cost, no phones required. We'd
love to hear how it goes.

▲ THANK YOU

Reach out.

Want the case materials, the slides, or to swap notes on what's working in your classroom? We'd love to hear from you.

European Journal of Educational Research: 25 studies, overall effect size $g = 1.08$ (large), meaning the average PBL student scores higher than roughly 86% of traditionally-taught students. eu-jer.com

Same event. Two ways to teach it.

EVENT During Year 1, Cato Consultants provided **\$84,000** of consulting services. The work is done and the bills are sent, but no cash has been collected.

THE TRADITIONAL OPENING MOVE

Memorize the entry

Accounts Receivable	84,000
Revenue	84,000

Debits and credits on day one. Students can produce this. **So can every AI tool they own.**

THE USER-APPROACH OPENING MOVE

Ask what it means

1 What did this event do to the company's **position?** **BALANCE SHEET**
Assets, liabilities, equity: read straight off the first columns of the model.

2 Did the **owners** win or lose? **INCOME STATEMENT**
Revenue flows to net income, and the model shows it landing in retained earnings.

3 Where's the **cash**? **CASH FLOWS**
Operating, investing, or financing, and the model shows when cash and earnings tell different stories.

The accounting cycle: **what you drill matters**

Every financial accounting course walks students through the full cycle a few times. Then the semester becomes drill, and the question is **which step you drill**.

We still teach the full cycle. **We just spend the drill time on the last step.**

One event, every statement at once

EVENT During Year 1, Cato Consultants provided **\$84,000** of consulting services on account. Work done, bills sent, no cash collected.

FINANCIAL STATEMENT IMPACT

👁 Show journal entry

Balance Sheet								Income Statement					Stmt of Cash Flows	
Cash	+	Accts Rec.	=	Liab.	+	Com. Stk.	+	Ret. Earn.	Rev.	-	Exp.	=	Net Inc.	
NA	+	84,000	=	NA	+	NA	+	84,000	84,000	-	NA	=	84,000	NA

Assets up, equity up. Claims on the customer are real value, even before cash arrives.

The owners are better off. Revenue flows to net income and into retained earnings.

No cash moved. Accrual vs. cash becomes intuitive, not a rule to memorize.

Toggle the journal entry on or off. FFAC teaches it alongside the model; IFAB can leave it out entirely.

Now a harder one: a deferral

EVENT On March 1, Year 1, Alvarado pays **\$12,000** cash to lease office space for one year, beginning immediately.

FINANCIAL STATEMENT IMPACT

👁 Show journal entry

Balance Sheet								Income Statement				Stmt of Cash Flows		
Cash	+	Prepaid Rent	=	Liab.	+	Com. Stk.	+	Ret. Earn.	Rev.	-	Exp.	=	Net Inc.	
(12,000)	+	12,000	=	NA	+	NA	+	NA	NA	-	NA	=	NA	(12,000) OA

(12,000) OA

An asset swap. Cash becomes a year of office space. Total assets unchanged, equity untouched.

No expense yet. The cost reaches the income statement month by month, as the space is used.

Cash left today. An operating outflow now. Students see the timing difference directly.

Later in the chapter, adjusting entries recognize the rent expense month by month as the space is used.

Two approaches to financial accounting

Both texts teach financial statement impacts, real-world examples, and data analytics. You choose when, or whether, to introduce debits and credits.

Fundamental Financial Accounting Concepts

- ✓ Financial statement impacts
- ✓ Real-world examples & data analytics
- ✓ **Debits and credits throughout**

Introductory Financial Accounting for Business

- ✓ Financial statement impacts
- ✓ Real-world examples & data analytics
- ✓ **Delayed or no debits and credits**

The approach is the same in both. **The difference is when students meet the ledger.**

Chapter by chapter: one difference that matters

Fundamental Financial Accounting Concepts

- 1 An Introduction to Accounting
- 2 Accounting for Accruals and Deferrals
- 3 The Double-Entry Accounting System**
- 4 Accounting for Merchandising Businesses
- 5 Accounting for Inventories
- 6 Internal Control and Accounting for Cash
- 7 Accounting for Receivables
- 8 Accounting for Long-Term Operational Assets
- 9 Accounting for Current Liabilities and Payroll
- 10 Accounting for Long-Term Debt
- 11 Proprietorships, Partnerships, and Corporations
- 12 Statement of Cash Flows
- 13 Financial Statement Analysis *(online in Connect)*

CH 3 · EARLY

Introductory Financial Accounting for Business

- 1 An Introduction to Accounting
- 2 Accounting for Accruals
- 3 Accounting for Deferrals
- 4 Accounting for Merchandising Businesses
- 5 Accounting for Inventories
- 6 Internal Control and Accounting for Cash
- 7 Accounting for Receivables
- 8 Accounting for Long-Term Operational Assets
- 9 Accounting for Current Liabilities and Payroll
- 10 Accounting for Long-Term Debt
- 11 Proprietorships, Partnerships, and Corporations
- 12 Statement of Cash Flows
- 13 The Double-Entry Accounting System**
- 14 Financial Statement Analysis *(online in Connect)*

CH 13 · LATE & OPTIONAL

Same coverage, same order. The only structural difference is where the double-entry system lives: chapter 3 or chapter 13.
